A Dozen Ways MBMA is Transforming the Concept of Metal Buildings

By Jeff Carman

The Metal Building Manufacturing Association (MBMA) has seen a lot of growth over the years. It consists of suppliers, members, and organizations, and now it is an influential aspect of the metal building construction industry.

MBMA has a long history and has been a driving force in the development of metal building systems. It has been instrumental in setting industry standards and guidelines, and in promoting the benefits of metal buildings. MBMA is dedicated to improving the quality and performance of metal building systems.

MBMA is a non-profit organization that is governed by a board of directors. It is an association for metal building system producers, manufacturers, material suppliers, industry consultants, and other stakeholders.

The board of directors is responsible for setting policy, overseeing the implementation of programs, and ensuring that the organization is meeting its goals. The board meets several times a year to discuss the organization's performance and to set new goals.

In order to serve its members and the industry, MBMA has several committees and task forces that work on specific projects. These committees are responsible for developing guidelines, research projects, and other initiatives.

MBMA is also involved in advocacy efforts, working with government officials at the federal, state, and local levels to promote the metal building industry. MBMA works closely with the American Institute of Steel Construction (AISC) and other organizations to ensure that metal buildings are safe and efficient.
